Job description

As Software Engineer in Test, you will work with a team of talented developers and quality engineers within the Adobe Romania campus. You will perform testing of scalable web architectures, distributed systems and integration of heterogeneous complex systems.

You will be responsible for developing test applications for core code libraries, automation scripting as well as end-user manual testing.

Main responsibilities:

- Works closely with development counterpart, can read and understand production code.
- Performs user and workflow testing, exhibiting ability through analytic skill and experience to anticipate the larger ramifications and interactions of a bug.
- Performs in-depth product testing such as writing and executing test scripts, and writing test specifications from product specifications with moderate supervision.
- Can use, understand, and write new automated tests for owned areas.
- Achieves product area expertise: able to answer questions, review features.
- Writes documentation for related areas which independently follows up on issues and communicates status to management in a timely manner.
- Conveys information clearly and effectively within bug reports and documentation.

Required Skills:

For this job we are searching for people with:

- Relevant College Diploma and min. 5 years industry experience.
- Advanced knowledge of one core operating system and functional in at least one other.
- Good knowledge of software testing fundamentals.
- Good understanding of common testing methodologies and ability to apply them.
- Ability to understand and interpret product specifications.
- Good problem solving and diagnostic skills, experience with troubleshooting.
- Knowledge of at least one scripting language such as Python, Perl, Ruby, JavaScript, and ActionScript is a plus.
- Excellent written and verbal communication skills.
- Fluent in English (both written and spoken)
